Easy ways to create Glitter Tattoo Art ...

.. on lots of different surfaces!

**Glitter
Body ...**

**Glitter
Nails ...**

**Glitter
Fashion ...**

**Shiny
Foil ...**

**Special
effects**

**Velvety
Flock**

(These special effect sheets are not for body, skin or nail application)

- It's so easy to create Glitza tattoo art using your Sparkle Studio! Before you begin make sure your skin, nail or fashion surface is clean, dry, free from oils / make up, and also is as flat as possible.
- Cut your chosen design out from the sheet, peel the transparent film away from its backing and place the design onto the surface, make sure the gluey side is face down.

- Press down on the design and gently rub or hold to allow heat from your hand to penetrate the tattoo, which allows the gluey side to transfer onto the surface. Lift the film gently up at one corner to check if the tattoo has transferred to your skin (or object) and if it hasn't, push it back down slowly and gently rub / hold for longer.

Skin types and temperatures can affect the speed the tattoos transfer to surfaces.

Please note: small tattoos transfer quicker than larger ones. It's best to take your time.

- When ready, peel off the backing film and you're now ready to Glitza-up your design with glitter, foils or Flock... or a combination of all 3!

Sparkly Glitter - Dip the small brush supplied into the glitter and brush it onto the design. You can get creative and mix the colours for amazing effects! Use the large brush for bigger designs or to brush the spare glitter away.

Shiny Foil (For accessories only and not the body, skin or nail) - Place the MATT side of the foil onto the design and press it down quite hard with the end of the large silver brush, or similar. Gently lift the sheet of foil away to reveal the shiny design!

Velvety Flock (For accessories only and not the body, skin or nail) - Place the flock side of the sheet down onto the design.

TOP TIP for best results, firmly press and rub the flock with the end of the large silver brush, or similar.

The flock takes more time to stick than glitter, so do not rush.

Adding Gems - Use the tweezers provided to lift the gem and to place it on top of your design and the glue will hold it in position.

Use the Magnifier - Ideal when creating detail in your designs, such as on your nails.

For Best Results on Accessories - Use Glitza tattoos on flat, smooth surfaces such as plastic / glass / metal / wood, and textiles that are smooth and non-fluffy.

To Remove

Glitter tattoos on the body and nail are waterproof and could remain for 5 days but are easily removed using warm water and soap or a facial toner / baby oil. The foil and flock special effects on your textile accessories will wash away with soapy warm water. They will remain for 1 or 2 washes in cold water. Tattoos on more solid surfaces are likely to remain intact for quite a while unless they are cleaned or rubbed against other surfaces.
