

MAKE YOUR
WORLD BIGGER

360 SUPER HD MICROSCOPE

INSTRUCTION MANUAL

COMPONENTS

Get to know your HD Microscope and all the functions it has to offer.

CONTENTS

- 1 x microscope
- 1 x smartphone adapter
- 2 x prepared slides
- 10 x blank slides
- 12 x slide covers
- 12 x blank labels
- 2 x collecting vials
- 1 x tweezers
- 1 x manual

HELPFUL HINTS

1. The most important parts of your microscope are the lenses. Handle them with care. If the lenses are dirty or dusty you can clean them with a soft cotton cloth or a special lens-cleaning tissue. Do not wipe them with a finger or a facial tissue.
2. If you are not going to use your microscope for a week or more, remove the three batteries that power the illuminators.
3. Protect your microscope from dust and moisture by always storing it in its box.

Things you may need for making slides that are not included with this set:

- Transparent glue
- Coloured dye (optional)

BATTERY INSTALLATION

1. Read the important battery information on page 7.
2. Unscrew the battery door on the base of the microscope.
3. Insert 3 x AAA as shown in the battery compartment. Make sure the + and - terminals on the batteries match the illustration.
4. Replace the battery door, taking care not to over-tighten the screw.

USING YOUR MICROSCOPE

1. Press the power switch to turn on the illuminators. For slide viewing, change the bottom illuminator brightness by turning the adjustment knob (A). Use the top illuminator adjustment (B) for solid object viewing.
2. The rotating colour/light filter (C) makes it easier to observe the prepared slide. A coloured filter heightens the contrast of colour prepared slides. A range of light aperture (hole) sizes is available to alter the focus of the light. When the large aperture is used the slide appears very bright. The smallest aperture is helpful when examining a certain area in more detail.
3. Rotate the lens turret until the shortest objective lens (60X) aligns with the opening in the stage (it will click into place when it is aligned). Check that the light can be seen through the eyepiece.
4. Place a prepared slide on the stage and fasten it in place with the clips.
5. Using the focusing knob (D), lower the objective lens as close as possible to the prepared slide. Next, looking through the eyepiece, turn the knob anti-clockwise slowly until the image is clear.
6. To increase the magnification, rotate the lens turret until the next largest lens (120X) is aligned with the specimen. Only use the highest magnification (200X) after using the other two, otherwise you may have difficulty focusing on the slide.

7. The eyepiece can be rotated to different positions by loosening the eyepiece position lock (E) and turning the eyepiece base (F) directly.
8. The microscope will power off automatically after one hour of idle time.

USING THE SMARTPHONE ADAPTOR

1. Loosen the screw at the back of the adaptor and put the smartphone on it, facing up.
2. Adjust the position of the horizontal arm to fit the width of the smartphone and tighten the screw just enough to keep it in position.
3. Align the centre of the adaptor hole of the swing arm to the smartphone camera. Tighten the screw so that the smartphone is securely held in the adaptor.

MAKE YOUR WORLD BIGGER

USING THE SMARTPHONE ADAPTOR (CONT...)

- Loosen the small retaining screw at the top. Attach the adaptor-smartphone assembly to the microscope eyepiece as shown. The adaptor should be fully inserted into the eyepiece for best results. Tighten the retaining screw.
- With the camera app opened, re-adjust the smartphone camera position by slightly loosening the main adaptor screw if necessary. The image circle should be at the centre of the screen. Adjust the focus knob until the image is clear.

HOW TO PREPARE A SLIDE

Use your tweezers and the vials to collect very small specimens from your garden or home. Items that are good to look at under a microscope are pieces of bath sponge, leaves, plant roots, flower stems, sand, dirt, fabric fibres, salt and seeds. Please note that if the specimen is not thin it can only be inspected using the microscope upper illuminator. Light from the bottom illuminator will not shine through thick specimens. If the sample is very thin and clear a drop of dye may make details show more clearly. Methylene blue dye (not included) can be obtained from an aquarium supply store.

CAUTION!

Dyes and food colouring can stain. Always follow the safety instructions on dye and food colouring bottles. We recommend that children wear overalls and/or old clothes and that you cover furnishings, carpets and work surfaces. Always follow the safety instructions on dye bottles. When using dyes, adult supervision is essential.

MAKING A TEMPORARY SLIDE

- Wipe a blank slide clean, as dirt or grease may affect the viewing of your specimen.
- Prepare a thin sample. You may have to ask an adult to slice something for you, as knives and scissors can be sharp. Cross-sections of stems, roots and pieces of leaves are really interesting under the microscope. When any kind of cutting is involved, adult supervision is essential.
- Pick up your sample with the tweezers and put it on the centre section of the slide. Add one drop of water or, if needed, you can now add a drop of dye/food colouring using your pipette.
- Gently place a slide cover (see-through plastic label) over the sample, being careful not to allow in any air bubbles.

- Remove any excess water or dye/food colouring with a piece of paper towel (not included) by pressing it down gently over the slide cover.
- Observe your slide.

MAKING A PERMANENT SLIDE

- Start with a clean slide and slide cover. Make sure your hands are clean and dry when handling the slide covers.
- Follow Steps 2 and 3 as before.
- Before placing the slide cover over your specimen add several drops of transparent glue (not included). Caution! Always follow the safety instructions on glue bottles.
- Place the slide cover gently over the sample and carefully squeeze out any air bubbles.

- Place your new slide in a safe place and let it dry for a day before you observe it under the microscope.

IMPORTANT: Wash your hands before and after every project using warm water and soap. Also, wash any of the tools and accessories that have been used to prepare specimens. Be careful when handling the slides and slide covers. Make sure an adult knows what you are doing and is available to help you.

IMPORTANT INFORMATION - Safe Battery Usage

- Batteries must be inserted or removed by an adult.
- Do not mix battery types (for example, alkaline and zinc carbon), or old and new batteries.
- Do not attempt to recharge non-rechargeable batteries, as they may leak or explode.
- Batteries must be inserted with the correct polarity.
- Do not short circuit the supply terminals.
- Remove exhausted batteries from the toy.
- Remove rechargeable batteries from the toy before charging.
- Rechargeable batteries must be charged by an adult.
- Use only the recommended battery type or their equivalent.
- Do not dispose of batteries in fire, as they may leak or explode.
- Remove batteries from the toy if it is not being used for an extended period of time.

THIS 41-PIECE
SET INCLUDES
SLIDES, TOOLS &
ACCESSORIES
FOR COLLECTING
AND CREATING
SPECIMENS

Requires 3 x 1.5V AAA batteries (not included).

WARNING!

To be used under
the direct supervision
of an adult.

The purpose of the crossed-out wheellie bin symbol is to remind us that most electrical product and batteries contain trace elements which could be harmful to our environment and therefore our health. We must all be careful to dispose of them responsibly in a specifically designated way – either using a collection scheme or into the correctly labelled civic amenity (NOT into general waste) – this will help your local authority to arrange to recycle or dispose of them in the appropriate manner.

Please retain the information on this manual for future reference.

Colour, designs and decorations may vary from those shown in the photographs.
